carroll pursell tells the story of the evolution of american technology since world war ii his fascinating and surprising history links pop culture icons with landmarks in technological innovation and shows how postwar politics left their mark on everything from television automobiles and genetically engineered crops to contraceptives tupperware and the veg o matic just as america s domestic and international policies became inextricably linked during the cold war so did the nation s public and private technologies the spread of the suburbs fed into demands for an interstate highway system which itself became implicated in urban renewal projects fear of slipping into a postwar economic depression was offset by the creation of a consumers republic in which buying and using consumer goods became the ultimate act of citizenship and a symbol of an american way of life

pursell begins with the events of world war ii and the increasing belief that technological progress and the science that supported it held the key to a stronger richer and happier america he looks at the effect of returning american servicemen and servicewomen and the marshall plan which sought to integrate western europe into america s economic business and technological structure he considers the accumulating problems associated with american technological supremacy which by the end of the 1960s led to a crisis of confidence pursell concludes with an analysis of how consumer technologies create a cultural understanding that makes political technologies acceptable and even seem inevitable while those same political technologies provide both form and content for the technologies found at home and at work by understanding this history pursell hopes to advance a better understanding of the postwar american self

how technological change in the west has been driven by the pursuit of improvement a history of technology from plows and printing presses to penicillin the atomic bomb and the computer why does technology change over time how does it change and what difference does it make in this sweeping ambitious look at a thousand years of western experience robert friedel argues that technological change comes largely through the pursuit of improvement the deep rooted belief that things could be done in a better way what friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war improvements can be ephemeral or lasting and one person s improvement may not always be viewed as such by others friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not these processes he emphasizes have created both winners and losers in history friedel presents a series of narratives of western technology that begin in the eleventh century and stretch into the twenty first familiar figures from the history of invention are joined by others the italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to gustav eiffel friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide the most comprehensive attempt to tell the story of western technology in many years engagingly written and lavishly illustrated a culture of improvement documents the ways in which the drive for improvement has shaped our modern world
